I like to keep a few python scripts handy, this is more of a cheatsheet, to search for a particular thing! Most of these are one liners, so really helpful to add into other scripts! You should be able to run them in the following way:

```
python -c "{script}"
```

e.g.

```
python -c "import uuid; print(uuid.uuid1())"
```

## Generate a UUID

```
import uuid; print(uuid.uuid1())
```

## Create a Fernet Key

```
from cryptography.fernet import Fernet;
print(Fernet.generate_key().decode())
```
